

HARDLINE™ COAL

HardLine Performance Ducting provides industry leading benefits for coal mining applications. Using our purpose-built RigiFLEX-FR polymer material, HardLine Performance Ducting offers improved airflow performance, efficiency gains, cost savings, reliability, environmental responsibility and safety to the mining industry.

Our low friction and leakage allow you to transport more air over a longer distance with a smaller diameter. 10' lengths in standard diameters for coal mining of 16, 20, and 24". When ducting is not in use, it can be saved for a later date or repurposed for other HardLine projects.

Accessories and options for HardLine Coal include premade Pitot tube holes, dampers, sliders and handles.

FEATURES AND BENEFITS

- RigiFLEX-FR semi-rigid polymer
- Fully welded in factory

- Longer cross cuts
- Offset energy savings

- Handles for easy handling
- Simple coupling system

- More air with smaller tubing
- Supports positive and negative pressure
- No external sealing required

- Fire resistant materials
- Quiet and safe for miners
- Lighter than steel

- Reusable
- No plastic wrap required
